

ABSTRACT OF THE DISCLOSURE

[0039] First and second stackable and interlocking carrying cases having particular application for use at a mobile tactical command and control center to be operated in the field. The first carrying case transports a pull-out desk top and a pull-top drawer at the interior thereof. The second carrying case transports a shock isolated housing at the interior thereof to which standard (e.g., 19 inch) rack mounted electronics are connected. A plurality of the first and second carrying cases can be stacked one above the other to form a pair of vertical columns. The pull-out desk top slides outwardly from the first carrying case in one of the vertical columns so as to extend between the pair of columns and thereby create a flat writing surfaces, or the like, for building a modular desk. Access to the electronics necessary to operate the tactical command and control center is available from one or more of the second carrying cases in the pair of vertical columns.
